SCOPE OF WORK

Textile Institution HRM & License Verification System

Prepared for: Product Design Team

Prepared by: Nasim Redoy

Document Type: Functional Requirements & Scope of Work (Draft v1.1)

Date: 08 September 2026 (Revised — incorporates client feedback on v1.0)

1. Document Overview

This document consolidates and organizes the client's raw requirements into a structured Scope of Work (SOW) for a two-phase system: (1) a full Human Resource & Institution Management (HRM) platform for textile educational institutions, and (2) a License Verification module for individual textile professionals and third-party checking organizations. The purpose of this document is to give the Product Design Team a clear, ordered reference for wireframing, user-flow mapping, and UI/UX design.

The requirements below have been reorganized by user role and functional module. Where the original requirements were ambiguous, incomplete, or had a numbering conflict, this is flagged in Section 6 ("Assumptions & Open Questions") for client confirmation before design work begins.

2. Project Objective

To build a centralized, multi-tier web platform that allows a national Head Office to manage textile educational institutions across divisions and districts — covering admissions, academics, finance, assets, and human resources — and, in a second phase, to provide a public-facing license issuance and verification system for individual textile professionals, including paid verification access for third-party organizations.

3. Phase 1 — Textile Institution Management System

3.1 User Roles & Access Hierarchy (RBAC)

Per client-approved revision, the administrative hierarchy is structured under a Ministry, with role-based access cascading downward through five tiers before reaching the institution's own internal roles.

3.1.1 Ministry / Administrative Hierarchy

1. Ministry Super Admin — top-level role; full system access across all divisions, districts, and institutions.
2. Division Admin — scoped access to all districts and institutions within an assigned division.
3. District Admin — scoped access to all institutions within an assigned district.
4. Institution Admin — scoped access to a single institution; oversees the institution's own Principal, Teacher, and Student roles (see Section 3.3).
5. Other Institution(s) — a District Admin oversees multiple Institution Admins, one per institution in that district.

Design note: access scope cascades downward (Ministry Super Admin > Division Admin > District Admin > Institution Admin > Principal / Teacher / Student). The Ministry Super Admin has visibility across all divisions, districts, and institutions; each lower tier is restricted to its own jurisdiction's data.

3.2 Ministry Super Admin Module

The following functions are available to the Ministry Super Admin role (previously referred to as “Super Admin / Head Office”):

3.2.1 Institution & Category Setup

- Add and manage Institution Categories (e.g., Government College, Diploma College, Vocational College).
- Add and manage Institutions, each linked to a category, and to a division/district for hierarchy scoping.

3.2.2 User & Access Control

- Add system users (across all hierarchy levels: division, district, institution).
- Add Roles and define granular permissions per role.
- Assign one or more roles to a user.

3.2.3 Dashboard & Reporting

- Customizable dashboard (widgets/metrics configurable by the Super Admin).
- Requirement reports: view, filter, and download (e.g., by institution, division, district, date range).

3.2.4 Admission Management

- Full admission process setup (define admission cycles, eligibility rules, seat quotas, required documents, etc.).
- Student Application — online application submission and tracking.
- Result Publication — admission/entrance test result processing and publishing.
- Student Migration — process for transferring an admitted/enrolled student between institutions.

3.2.5 Budget & Asset Allocation

- Assign and track budget on a per-institution basis.
- Assign and track assets on a per-institution basis (see also Section 3.3.10 for institution-level asset tracking).

3.2.6 Consolidated Reporting

- Institution-wise reports across all modules (admissions, finance, assets, attendance, results, etc.).
- Additional/ad-hoc reports as further requirements are identified.

3.3 Institution-Level Module

The following functions apply within a single institution's portal.

3.3.1 Institution Login Types

1. Principal — highest authority within the institution; can manage teachers, students, classes, assets, roles, and approvals.
2. Teacher — manages assigned classes, content, attendance, and results.
3. Student — views class content, results, attendance, and manages own profile.

3.3.2 Teacher & Student Management

- Add Teacher records.
- Add Student records. Students are automatically assigned to an institution based on the central admission test result; the Principal can manually modify this assignment if required.

3.3.3 Class Management

- Add classes.
- Assign a class to a teacher.
- Teachers add class content/materials for their assigned classes.
- Teachers can assign classes to students.

3.3.4 Student Portal

- After login, students can view their class content, results, attendance, and any other information based on what has been assigned/shared with them.
- Students can update their own profile information. (Client note: to be kept consistent with issued certificate data — see Section 6.)
- Student Ledger — consolidated record of a student's academic/financial transactions.
- Student Grade Table.
- Advising Table — academic advisor assignment and notes per student.
- Teaching Evaluation — student feedback/evaluation of teachers.
- Curriculum Analysis.
- Code of Conduct — institution's conduct policy, viewable by students.
- Academic Calendar.

3.3.4(1) Online Application (Student Only)

Self-service requests a student can submit online, each with its own approval workflow:

- Admit Card.
- Apply for a Waiver.

- Re-admission.
- Course Drop.
- Semester Drop.
- Online Payment (Fees).
- Testimonial.
- Incomplete Transcript.
- PVC & Transcript.
- Certificate & Transcript.
- Duplicate Certificate & Transcript (if original is lost).
- Medium of Instruction.
- Transfer Program.
- Cancel Studentship.
- Convocation.

3.3.5 Live Attendance System

- Real-time attendance capture for both teachers and students (teachers can control/direct access to student attendance capture).
- Head Office can view live attendance status of both teachers and students directly from its own dashboard after login.

3.3.6 Finance Management

- Track institution-level expenses: what was spent, where, when, and how much.
- Track budget utilization against the amount allocated by Head Office.

3.3.7 Inventory & Asset Management

- Track assets provided by Head Office to the institution.
- Principal can assign a given asset to a specific person, and track which person currently holds it.
- Track current availability status of each asset (in use / available / unavailable).
- Track damaged/lost assets along with the reason for damage or loss.
- Procurement system — request and track procurement of new assets/materials.
- LC (Letter of Credit) document upload — attach and store LC documents against a procurement/import record.
- PO (Purchase Order) system — generate and track purchase orders.
- Gate Pass — log and track movement of assets/materials in and out of the institution premises.
- (Client has flagged these four items only at a high level — detailed workflow, approval chain, and required fields for each need to be confirmed; see Section 6.)

3.3.8 Library Management

- Full library management functionality: book catalog, member registration, issue/return workflow, due-date and fine tracking, inventory of copies, and search/browse for students and staff.
- (Design team to propose the complete standard feature set for a library module — client has requested this be fully fleshed out.)

3.3.9 Result Management

- Semester-wise result management: entry, calculation, publishing, and history per student.

3.3.10 Leave Management

- Leave types: Casual Leave (CL), Sick Leave (SL), Earned Leave (EL), and other configurable types.
- Full leave workflow: application → approval → rejection, with status tracking and leave balance management.
- Client has flagged that Leave Management alone does not cover full staff HR needs — a broader HRM/staff management module (e.g., staff profile & records, service history, appointment/promotion tracking) is currently missing from scope and needs to be defined separately; see Section 6.

3.3.11 Role-Based Menu Access

- Menu/feature access is controlled by role.
- Principal can assign and update role-based menu access within their institution.

3.3.12 Certification System

- After graduation, a student can apply for a certificate through the system.
- The full certificate application and issuance workflow is managed within the web platform.

3.3.13 Government API Integration

- Integration with a government ("MY GOV") API where required (e.g., for identity verification or certificate registration — specific use case to be confirmed with client).

3.3.14 Alumni Management

- After the final exam result is published, the Principal can mark a student as an Alumni.
- Once marked as Alumni, the student's login is restricted to an Alumni-specific menu only.
- Within the Alumni menu, the user can update their current professional information (e.g., current job/position, LinkedIn profile link).

4. Phase 2 — License Verification Module

This phase is a fully automated module, separate from but potentially integrated with Phase 1, that manages professional license issuance and third-party verification for individuals in the textile industry.

4.1 License Application

- An individual textile professional can apply for a license through a public-facing application form.

4.2 License Approval Workflow

- Head Office reviews the application against validation criteria and approves or rejects the license request.
- Approved licenses are issued with a unique license/certificate number.

4.3 Third-Party Verification Access

- External organizations can register as members of the platform for the purpose of checking/verifying a license or certificate.
- Verification is performed by searching using the license/certificate number.

4.4 Paid Verification

- Third-party organizations must complete a payment before performing a license/certificate check.
- (Payment gateway, pricing model — per-check vs. subscription — and invoicing to be defined with client.)

5. Module Summary Matrix

Phase	Module	Primary Users
Phase 1	Institution & Category Setup	Ministry Super Admin
Phase 1	User, Role & Permission Management	Ministry Super Admin, Principal

Phase	Module	Primary Users
Phase 1	Dashboard & Reporting	Ministry Super Admin, Division/District/Institution Admin, Principal
Phase 1	Admission (Setup, Apply, Result, Migration)	Ministry Super Admin, Student
Phase 1	Budget & Asset Allocation (Institution-wise)	Ministry Super Admin, Principal
Phase 1	Teacher, Student & Class Management	Principal, Teacher
Phase 1	Student Portal & Profile (incl. Ledger, Grades, Advising, Evaluation)	Student
Phase 1	Online Application (Admit Card, Waiver, Transcript, etc.)	Student
Phase 1	Live Attendance	Teacher, Student, Head Office
Phase 1	Finance Tracking	Principal
Phase 1	Inventory & Asset Management (incl. Procurement, LC, PO, Gate Pass)	Principal
Phase 1	Library Management	Principal, Teacher, Student
Phase 1	Result Management (Semester-wise)	Teacher, Principal, Student
Phase 1	Leave Management	Teacher, Principal
Phase 1	Certification System	Student, Principal
Phase 1	Government API Integration	System / Head Office
Phase 1	Alumni Management	Principal, Alumni (former Student)
Phase 2	License Application	Individual Professional
Phase 2	License Approval	Head Office
Phase 2	Third-Party Verification Membership	3rd-Party Organization
Phase 2	Paid License/Certificate Check	3rd-Party Organization

6. Assumptions & Open Questions

The following points were unclear, incomplete, or contained numbering conflicts in the original raw requirements. These should be confirmed with the client before design/development begins.

- Section 3.2.6 ("Institution-wise all report") and the item labeled "others (based on requirement)" were both numbered "12" in the original notes — both are retained here as separate items under different sub-numbering.

- The exact fields/rules for "full admission process setup" (eligibility criteria, quota types, document requirements) need to be specified.
- The specific purpose of the "MY GOV" API integration (identity verification, certificate registration, or another use case) needs clarification.
- Dashboard customization: needs clarification on which widgets/KPIs are required per role.
- Library management was requested at a high level only ("use your brain") — the Design Team should propose a standard feature set (catalog, issue/return, fines, reservations) for client sign-off.
- Leave management: specific leave types beyond CL/SL/EL, and yearly quota/accrual rules, need to be defined.
- License verification payment model (per-check fee vs. subscription/membership fee) needs to be defined with the client.
- Relationship between Phase 1 (institution HRM) and Phase 2 (license verification) — e.g., whether a graduate's certificate from Phase 1 feeds directly into the Phase 2 license application — should be confirmed.
- Division and District entities: need confirmation on whether these are pre-defined administrative regions (e.g., existing government divisions/districts) or client-defined custom entities.
- Student Portal — “Students can update their own profile information” was annotated “As Certificate follow” by the client: needs confirmation on whether this means (a) profile fields should stay locked once a certificate has been issued, or (b) any profile update should also update the corresponding certificate record.
- Inventory & Asset Management — Procurement System, LC Document Upload, PO System, and Gate Pass were noted only as keywords; the approval chain, responsible roles, and required document fields for each need to be defined with the client.
- A broader HRM/staff management module (covering staff records, service history, appointments, etc., beyond Leave Management) was flagged by the client as missing from the current scope and needs to be scoped separately.
- The client's hierarchy sketch also referenced Registration History, Pre-Registration, and Course Advising Table, which are not explicitly listed in the finalized Student Portal / Online Application item lists above — need confirmation on whether these are separate features or already covered under Advising Table / Academic Calendar.
